

Pink tower pattern cards

Cut on the dashed lines. Lay one card by the rug and build what it shows, once the child builds the plain tower alone.

PATTERN 1

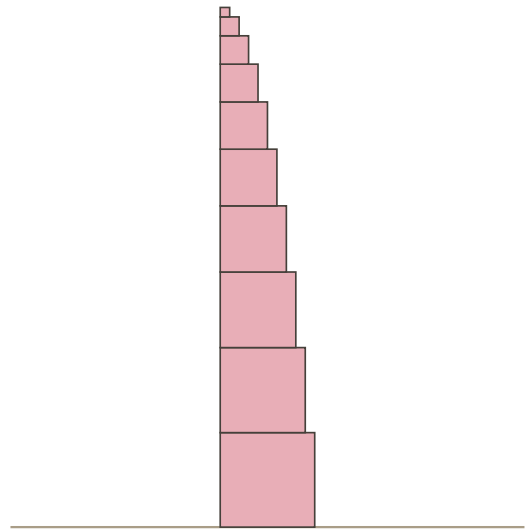

The tower

Largest cube on the rug, each next cube set in the center of the one below.

PATTERN 2

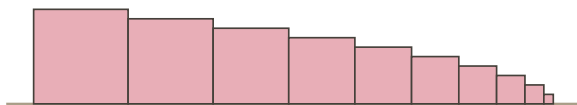

The tower against one corner

Every cube pushed into the same back corner. Each one leaves a 1 cm step the smallest cube can walk along.

PATTERN 3

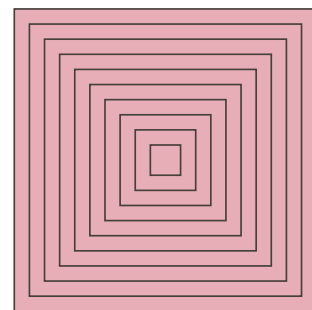

The row on the rug

Built lying down instead of up: largest to smallest, side by side, each cube touching the next.

PATTERN 4

The tower, from above

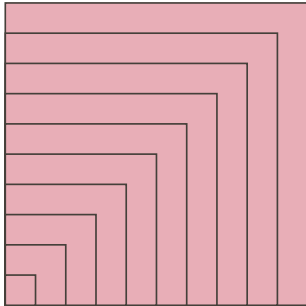

Stand over the centered tower and look down: ten squares, each one inside the last. Drawn larger than the side views.

Pink tower pattern cards

PATTERN 5

The corner tower, from above

From above, the corner tower shows ten squares that all share one corner. Drawn larger than the side views.

The side views (cards 1 to 3) are one eighth of real size: the 10 cm cube is 12.5 mm on the card and the built tower, 55 cm tall in real life, is just under 7 cm. The views from above (cards 4 and 5) are two fifths of real size, so the 1 cm cube shows. Print at 100%, never “fit to page”.

The 10 cm cube in a side view
